VTIS™ Measure It - Manage It

v-MAIL

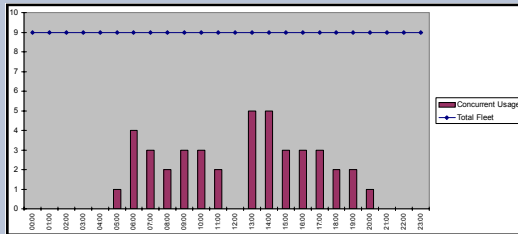

GSE Data Reporting Service

.....receive regular GSE reports.....key data delivered directly to your inbox.....make fast fact-based decisions.....

With our **VTIS v-HUB** GSE fleet management system, you can track virtually all aspects of your equipment — for example, who is using it, where it is, whether it is operational or idling, what its current fuel level is, and if it's been involved in a collision. But managing this data and using it effectively can be a challenge.

Whilst we offer two online web-based reporting systems that enable you to produce your own reports (**v-DASH** and **v-VIEW**), we understand that sometimes all you want is data delivered directly to you when you need it — so we introduced our **v-MAIL** service.

With **v-MAIL**, you can opt for any of the data you receive from your fleet via **v-HUB** to be sent to you on a regular basis. Data can be formatted in a number of different ways — typically as raw data (for example, a CSV file) or as pre-formatted Excel spreadsheets or Adobe pdf files, containing key information such as engine usage and fleet utilisation.

You can opt to receive this information daily, weekly, or monthly, depending upon what's best for your business. Reports can also be customised to meet your specific requirements.

Customer Daily Engine Usage Report						
Monday 11/01/2010						
Vehicle Type	Vehicle No	Total Usage (secs)	Total Usage (mins)	Idle Time (secs)	No. of Uses In Day	Average Duration per Usage (mins)

All vehicle data is hosted on our servers and is protected, secure and available 24/7.

Features

- Option to receive raw data as CSV file
- Wide variety of pre-formatted reports (Excel spreadsheets or Adobe pdf files) available
- Reports can be customised to meet specific customer requirements
- Compatible with **VTIS v-HUB** product range

Benefits

- Key operational data at your fingertips
- Receive daily, weekly or monthly fleet reports delivered directly to your inbox
- Make fast, fact-based decisions about your fleet
- Monitor key performance indicators
- Use raw data to carry out your own analyses
- No need to learn new software systems
- Worldwide access to your data

.....no need for new software systems.....carry out raw data analyses.....monitor key performance indicators.....
